Services Done Today...

Japanese Beetle Treatment:

- ◇ **Early Application** - A preventative step to lessen the damage caused by Japanese beetles. The chemical will dry on the foliage and the beetles will die after eating it. This will provide up to 2 weeks of protection for the foliage that is treated.
- ◇ **Application #1** - The spray kills the active beetles on contact and will dry on the foliage and help protect from future damage. This will provide up to 2 weeks of protection for the foliage that is treated.

Please call or email if you need another treatment

402-933-6282 ◇ info@DiamondCutLawns.net

- ◇ **What to look for:** An adult beetle feeds on over 300 different kinds of plants including roses, linden trees, birch trees, fruit trees, buckthorns and many more. Leaf tissues will be skeletonized, only the vascular portions of the leaf are left behind in a doily-like pattern. Flowers will appear finely shredded as if blasted with sand and fruits will be chewed into and hollowed out.
- ◇ **Other Services Offered:** Landscape Design & Install ◇ Landscape Lighting ◇ Weed Control ◇ Fertilization Programs ◇ Pruning & Shrub Maintenance ◇ Aeration & Overseeding ◇ Landscape Bed Weeding ◇ Turf Disease Spray

Thank You!
